**Subject:** comments on the draft ground disturbance regulations.

Dear sir:

Our firm has for the past two years been working and have completed a online ground disturbance program to meet the standards for both level 1 (101) and Level 2(202) as to the damage prevention councils guidelines.

Throughout the whole draft I have not noted any training requirements and would suggest the terms competent worker and a definition of what is a competent worker be added to the regulations. You do not have to indicate any specific training program however to confirm competent one must be trained to a set standard or awareness.

Thank you for allowing me to provide such input.
